

IHAR - HAR Image Extractor

A small open-source utility to extract embedded images from `.har` files exported from browser DevTools. Made with the help of ChatGPT-4o. Attribution appreciated.

What it does

- Extracts base64-encoded images (JPEG, PNG, WebP, etc.) from HAR files
- Useful when original media is unavailable
- Saves images to a user-selected folder

How to use

1. Run `extractor_gui.exe`
2. Select a `.har` file
3. Choose a folder
4. Click IMPORT
5. Images will be saved automatically

Run from source

```
pip install haralyzer pillow
```

```
python extractor_gui.py
```

Philosophy

This project was not made to impress - it was made to help.
